Description: The school offers the unique possibility of meeting internationally recognized researchers in the field of inflammation during four days without interruption. Students and faculty members will present their research projects in an informal atmosphere, which includes intense discussion. Students will receive input for their own work and learn how projects are created by principal investigators. One other important goal is the promotion of future scientific collaborations among the participating groups. The school starts with a scientific symposium in Bern (see separated invitation). The school is open for PhD and MD students. The number of students is limited to 30 due to space problems. PhD and MD/PhD students of the University Bern receive 30 credit points (PIAF program). Furthermore, the meeting is recognized for the continuous medical education and participants receive 16 credits in Allergology and Clinical Immunology FMH.
